

Password Reminder PRO™ v1.3 - Solution for Companies that Enforce Windows Password Changes

SysOp Tools, Inc. announced Password Reminder PRO v1.3 is now available for download, an enterprise solution that proactively notifies users when their domain password will expire.

Los Angeles, CA ([PRWEB](#)) October 17, 2007 -- SysOp Tools, Inc., a provider of Windows Active Directory security and administration software, announced Password Reminder PRO v1.3 is now available for download at www.sysoptools.com.

Password Reminder PRO automatically alerts users of upcoming domain password expirations in a reliable and professional manner, significantly lowering user frustrations and IT support overhead typically associated with a Windows [change password](#) environment.

Highlights:

- Simple, proven solution that allows OWA, VPN, RPC/HTTP Outlook, remote and Windows and non-Windows OS users to be notified when their password will expire.
- Strong ROI by reducing up to 80% of password-related IT help calls, lowering TCO associated with maintaining a Windows change-password environment.
- Empowers your users to become part of the change-password process and will substantially lower password-related IT help calls.
- Password expiration reminders sent in advance of [password expiration](#), ensuring no loss of system access.
- Easy to install and run, requires no scripting or coding knowledge and is set-it-and-forget-it easy to maintain.
- Comprehensive auditing and reporting; effortlessly keep track of your user accounts and identify potential security problems.
- Quickly review expiring, expired, non-expiring, inactive, unused, system and disabled user accounts and more with the powerful built-in reporting console.
- Works with Active Directory and any mail system including Exchange®, Novell® and Linux, and sends expiring password reminders to your users via email.
- Use with any mail server or client, whether in-house or externally hosted, regardless of client OS.
- Password Reminder PRO uses your existing Active Directory information and change password policy settings. Whether you have 50 users or 50,000, you're covered.
- The perfect tool for maintaining SOX, HIPAA, and PCI compliance with NT account security.
